Design ergonômico

O design busca o conforto e segurança do bebê. Fácil de instalar e retirar para utilizar na próxima fralda.

O sensor da fralda monitora a umidade e envia um sinal quando o bebê faz xixi

Todos que têm a permissão para acompanhar a atividade do bebê são notificados

Através do APP mães e papais conseguem comprar fraldas sem sair de casa.

Pelo histórico de troca de fraldas do bebê, você acompanha a quantidade usada por dia

A woman in a dark tank top is looking into a large mirror in a bathroom. The mirror reflects her and the room's lighting. In the foreground, a Moen U shower controller is mounted on a light-colored tiled wall. The controller has a digital display showing '100°' and '102°' and a central dial. To the right, a shower glass door is visible with a showerhead and a handheld shower wand.

Welcome to U by Moen

Demo the Controller and learn how easy it is to precisely control temperature, select shower outlets, and save your perfect shower as a preset for later.

Demo the Smartphone App to see how the same easy controls are available in the palm of your hand, along with up to 10 additional presets.

SMALT with voice

Connect SMALT with Amazon Echo and simply say "Alexa, dispense half a teaspoon of salt".

Bring the flavor

SMALT dispenses salt with a shake/pinch of your smartphone screen or simply turning the dial manually.

SECURITY IS SEXY

By Darlene Storm, Computerworld | FEB 2, 2015 12:09 PM PT

About

Most security news is about insecurity, hacking and cyber threats, bordering on scary. But when security is done right, it's a beautiful thing...sexy even. Security IS sexy.

IoT products required to meet minimum security standards starting 2024

🕒 2 min. read

⚡ View original

The European Commission has imposed minimum requirements for the security of IoT products, better known as smart devices, starting in 2024. If they do not meet these standards, the product will be banned from the EU market. The EU cybersecurity requirements for consumer products have been introduced as an addition to the EU Radio Equipment Directive (RED). Manufacturer Usage Description Specification

Abstract

This memo specifies a component-based architecture for Manufacturer Usage Descriptions (MUDs). The goal of MUD is to provide a means for end devices to signal to the network what sort of access and network functionality they require to properly function. The initial focus is on access control. Later work can delve into other aspects.

This memo specifies two YANG modules, IPv4 and IPv6 DHCP options, a Link Layer Discovery Protocol (LLDP) TLV, a URL, an X.509 certificate extension, and a means to sign and verify the descriptions.

Status of This Memo

This is an Internet Standards Track document.

This document is a product of the Internet Engineering Task Force (IETF). It represents the consensus of the IETF community. It has received public review and has been approved for publication by the Internet Engineering Steering Group (IESG). Further information on Internet Standards is available in [Section 2 of RFC 7841](#).
