

Autonomous System Information Service

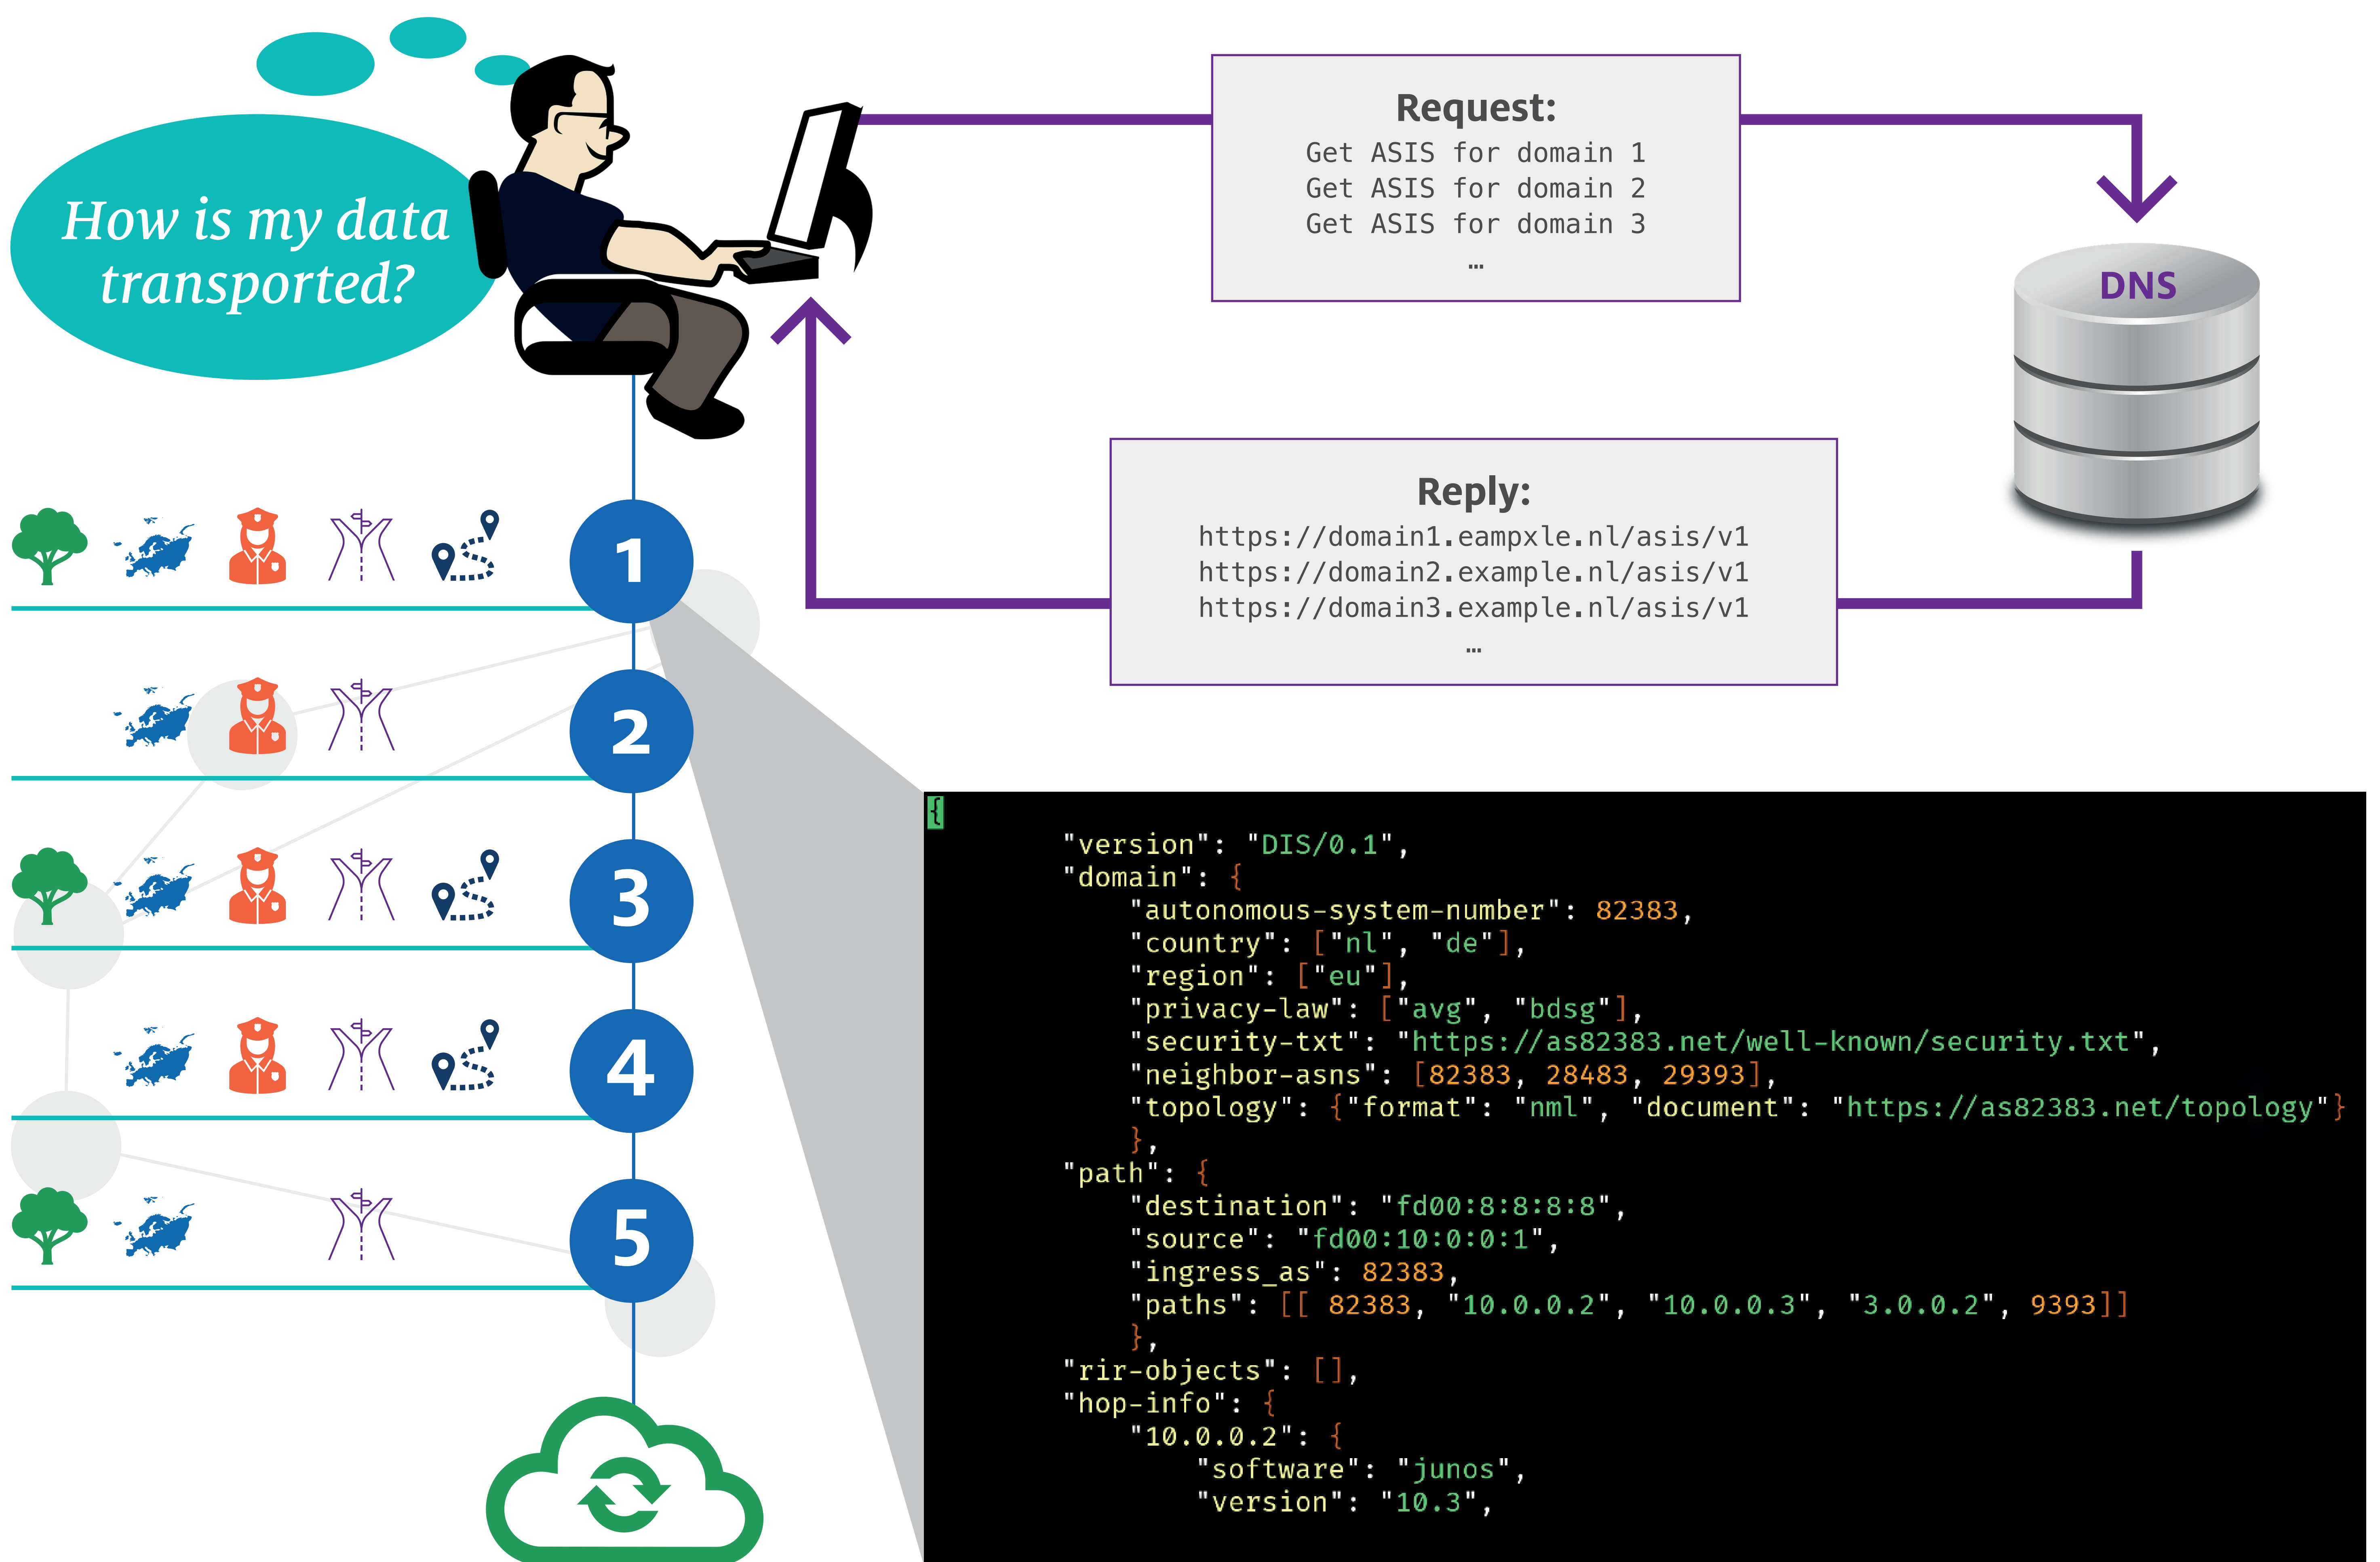

Ralph Koning, Elmer Lastdrager, Caspar Schutijser, Cristian Hesselman - SIDN Labs

What is ASIS?

ASIS allows network operators to **share information** about their network. This kind of **transparency** allows the organizations to get information about their **network supply chain**.

ASIS Benefits

- **decentralized** (self-hosted)
- **extensible** with structured data formats
- for sharing **public** information
- for sharing **confidential** information using access controls

ASIS data format v0.1: For our first prototype we use structured information using JSON.

ASIS information examples

- Energy footprint
- Data-law (GDPR)
- Security.txt
- Routing policies
- Internal routing information

More information/feedback

If you have feedback or applications that we did not think of we would like hear from you.
